SUMMARY

GTM engineer with 4 years building account-based and signal-based outbound for enterprise and B2B companies. Sole pipeline source for a 10+ person sales team at MapmyIndia, sourcing **90+ opportunities** that contributed to **₹18 Cr+ in closed revenue** and **10 to 15 SQLs a month** across BFSI, FMCG, fintech, automotive, real estate and healthcare. Builds the systems behind it: enrichment waterfalls, ICP scoring, signal-based prospecting, deliverability infrastructure and LLM workflows in n8n, Zapier, Clay and Claude Code.

EXPERIENCE

Lead Generation Executive, MapmyIndia – New Delhi July 2022 – Present

- Ran account-based outbound into BFSI, FMCG, retail and tech as the sole pipeline source for a 10+ person enterprise sales team, sourcing **90+ opportunities** that contributed to **₹18 Cr+ in closed revenue**
- Generated **10 to 15 SQLs a month** from top accounts across BFSI, FMCG, fintech, automotive, real estate and healthcare, including HDFC Bank, Tata Consumer Products, Paytm, Cars24, DLF and Apollo
- Multi-threaded **100+ target accounts a month** by mapping buying committees across business, product and operations leaders and sequencing them over email, LinkedIn and calls
- Built trigger-based plays around regulation and seasonal demand: a POS-compliance play for banks and payment companies, and a gaming play timed to the IPL peak that converted operators into paying customers
- Built industry plays across 10+ verticals (logistics, FMCG, EV, retail, e-commerce, gaming), each tied to one use case and one reason to buy
- Automated account research, enrichment, personalization and sending with n8n, Apify and LLMs
- Shaped GTM strategy with senior leadership in ongoing reviews, setting target segments, use cases, positioning and campaign messaging
- Turned a one-person outbound function into a repeatable playbook (research, ICP qualification, sequences, daily scorecard) and **trained 2 SDRs** who now run it
- Launched outbound for a new indoor navigation product from zero: account database, ICP and buyer roles for hospitals, airports and real estate

Technologies: *Smartlead, Apollo, LinkedIn Sales Navigator, Lusha, n8n, Apify, Gemini, ChatGPT*

Founder, Clospect – Remote Jan 2026 – Present

- Founded a GTM engineering practice that builds enrichment, ICP scoring, signal-based prospecting and sending infrastructure for B2B SaaS and recruitment companies
- Ran signal-based outbound for a recruitment client, from hiring signals to ICP scoring, verified contacts and sequences, turning **3,200 emails into 10 qualified leads and 5 closed deals** in month one, repeated in month two
- Designed an enrichment and qualification pipeline with Apify, Gemini, Clearout and Airtable that routes only qualified prospects into Smartlead sequences
- Built a hiring-signal workflow that spots expanding teams in LinkedIn job postings and drafts an opener
- Configured SPF, DKIM, DMARC, secondary domains and warm-up, holding **bounce rates under 1%**

Technologies: *n8n, Zapier, Apify, Gemini, Clearout, Airtable, Smartlead, Instantly*

PROJECTS

Klaroh – client reporting for cold-email agencies, in private beta | klaroh.online 2026

- Built a multi-tenant reporting platform that syncs campaigns, replies and mailbox health from the Instantly API and gives each agency client a no-login report, withholding any metric it cannot verify
- Wrote the product requirements and directed Claude Code to implement them, reviewing every change across **130+ pull requests and 230 tests** over 4 months
- Designed workspaces with roles, row-level security, encrypted API credentials and scheduled sync, and fixed a database read-access leak found in a security audit

Technologies: *Next.js, TypeScript, Supabase, PostgreSQL, Instantly API, Vercel, Claude Code*

GTM Validation Tool – lead qualification web app | github.com/jithujsam-cloud 2026

- Built a web app that imports CSV lead lists, scores ICP fit with LLM structured outputs and a written reason per verdict, and verifies emails through the Clearout API
- Designed a PostgreSQL job queue with leases, retries, error handling and rate-limit auto-pause, so runs resume without processing a lead twice
- Logged every API call with tokens, latency and cost, and added per-user authentication and data isolation

Technologies: *Next.js, TypeScript, Supabase, PostgreSQL, Gemini, OpenAI, Clearout*

Outbound Workflows in n8n – signal-to-sequence automation | github.com/jithujsam-cloud 2025 – 2026

- Built a hiring-signal pipeline where Apify pulls job postings by industry and role and Gemini returns a structured hiring analysis and opener for each account
- Rebuilt Clay-style waterfall enrichment in n8n, gating paid email verification behind ICP and email-quality scoring and upserting only verified, ICP-fit contacts into Airtable
- Built a sender that rewrites each email with Claude, sends on a randomized schedule within business hours, and tracks opens through a self-hosted webhook

Technologies: *n8n, Apify, Gemini, Claude, Clearout, Airtable, Gmail, webhooks*

SKILLS

GTM Engineering: ICP scoring and segmentation, lead scoring, enrichment waterfalls, signal-based prospecting, lead routing, account-based outbound, multichannel sequencing, A/B testing

Automation and AI: n8n (self-hosted), Zapier, Clay, Apify, LLM workflows (Claude, OpenAI, Gemini), Claude Code, structured outputs, prompt engineering

Integrations and Data: REST APIs, webhooks, rate limiting, retries and error handling, PostgreSQL, Supabase, Airtable, data hygiene

Prospecting: Apollo, LinkedIn Sales Navigator, Lusha, Clearout, NeverBounce

Deliverability: Smartlead, Instantly, SPF, DKIM, DMARC, domain rotation, inbox warm-up

Development: Next.js, TypeScript, Vercel, row-level security, job queues

EDUCATION

Bachelor of Business Administration, New Delhi Institution of Management – New Delhi 2022
